

Fannie Mae Connect Raw Data Download – Quick Tips

June 26, 2017

The raw data version of a report allows you to directly download the data without utilizing any Tableau functionality. Reports in Fannie Mae Connect that are available in PDF, TXT, and XLS formats are compatible with a raw data download.

Reports that have both Tableau and raw data options contain the same loan level details, where applicable. You must select your applicable seller/servicer number, report date, report section (based on tabs in Tableau version), and the format to download the report. Once you click “Download Raw Data”, the report will load in the Downloaded Reports section of the page.

- Step 1: Select your requested Seller/Servicer Numbers, multiple numbers can be selected**
- Step 2: Select the Report Dates, multiple dates can be selected**
- Step 3: Select the Report Section, only applicable to reports in Tableau with multiple tabs**
- Step 4: Select the format you want to export the file in**
- Step 5: Press the “Download Raw Data” button**

Once complete, the file will appear in the “Downloaded Reports” table at the bottom of the page.
