

## **A New eVault to Support eMortgages with Fannie Mae**

*March 7, 2017*

Fannie Mae is committed to enhancing the digital mortgage ecosystem and removing obstacles to eMortgage adoption. As part of our continuous efforts to simplify and enhance our technology, we have secured a next-generation electronic vault (eVault) through eOriginal, Inc., to meet our customers' needs and make it easier for you to do business with us.

An "eVault" provides the ability to accept and receive, and securely store electronic mortgage documents post-closing and prior to investor delivery. The new vault provides a more modern, efficient, and scalable platform that enables the secure management of electronically signed assets (eNotes) throughout their post-execution lifecycle. This new state-of-the-art platform also supports reporting, reconciliation, and regulatory process requirements. Learn more about the eVault in [eOriginal's press release](#) (March 6, 2017).

The movement to cloud-based/vendor-hosted solutions is an industry best practice that Fannie Mae employs for many of our technology solutions. Enhancing our eMortgage platform is just one of the steps we're taking to help our customers go digital. In choosing this solution, we empower our customers to go to market faster, support new enhancements and industry changes, and ultimately save time and money for our customers.

Looking ahead, Fannie Mae continues to champion eMortgage to help give our lenders freedom from paper-based processes at closing, operational efficiencies, and an overall better borrower experience. Visit the [eMortgages/eClosings page](#) for key resources and news.
